

## Confirming Your Careport Profile

For nearly a year, discharge planners at network hospitals have been using Careport, in conjunction with Allscripts, to send patient referrals to post-acute providers.

With Careport, discharge planners can customize a search for providers based on the specific needs of the patient. Lists are created using Careport's insurance, clinical capabilities, clinical pathways, and amenities filters. The discharge planner can then share a list of the most appropriate providers to the patient and their family for review.

The goal is to help patients make an informed decision that helps ensure they receive the right care in the right setting. That's why it's essential that you routinely review and update your Careport profile. Discharge planners depend on your profile to provide the most accurate and up-to-date information to their patients.

If you have questions or need help updating your profile, please contact [support@careporthealth.com](mailto:support@careporthealth.com).
