## CONTINUOUS GLUCOSE MONITORING (CGM) SYSTEM - AVAILABLE WITHIN THE PHARMACY PRESCRIPTION DRUG BENEFIT

Starting **Jan. 1, 2020**, there will be an enhancement to the pharmacy prescription drug benefit. Continuous Glucose Monitoring (CGM) system products will now be available at participating network pharmacies for Commercial and Healthcare Reform patients.

This change will help ensure continued, convenient access to continuous glucose monitoring (CGM) system products.

These products will also continue to be available under the medical benefit plan coverage through participating Durable Medical Equipment (DME) providers. Among the CGM products, **Dexcom** and **FreeStyle Libre** are available on the Preferred brand tier, and will be accessible at participating network pharmacies via the pharmacy prescription drug benefit.

We will be mailing letters to impacted patients and providers explaining this enhancement. Talk to your patients about this enhancement and their options for accessing the CGM system products they need.
