Attention MA Stars Primary Care Incentive Program Participating Providers

IMPORTANT GAP CLOSURE REMINDER:
HIGH BLOOD PRESSURE METRIC

Include rendering/servicing provider on NaviNet 1500 claims submissions with $0 CPTII codes

When submitting systolic and diastolic blood pressure values with CPTII codes (3074F, 3075F, 3078F, 3079F) via NaviNet 1500 claim submissions for outpatient visits, providers must select the rendering/servicing provider in order to meet gap closure requirements.

Values must be submitted using the provider who performed the outpatient visit on the date of service (DOS) of reported values, as shown in the screen shot below. Although this field in not required to submit the claim, **it is required to meet numerator compliance for the high blood pressure metric** if submitting $0 claims via NaviNet.

As shown below, Under Rendering/Servicing Provider, click the arrow to open the pull down menu which displays all providers within the group. **You will need to select the rendering/servicing provider who billed for services on the DOS in which the systolic and diastolic values are documented, and in which the CPTII codes are being submitted.**

If you need additional information about submitting $0 claims with systolic and diastolic blood pressure values with CPTII codes (3074F, 3045F, 3078F, 3079F) via NaviNet 1500 claim submissions, please contact your Clinical Transformation Consultant or Provider Account Liaison.
