
Who is naviHealth?

- Leader in post-acute care management and care transitions for health systems and health plans
- naviHealth is Guiding the Way to more efficient, more experienced, and more compassionate health care
- Leader in post-acute care management and care transitions for health systems and health plans
- By leveraging proprietary technology, naviHealth supports our partners' missions to improve patient care with the right mix of high-tech and high-touch tools
- naviHealth is unique in our ability to partner with organizations across the entire continuum of care, from health plans and health systems to accountable care organizations (ACOs) and post-acute care (PAC) providers

Mission: To work with extraordinary talented people who are committed to making a positive impact on society by transforming health care.

What does naviHealth do?

- naviHealth's clinical support services, proprietary technology, and advisory solutions help guide the way by optimizing workflows and allowing partners to make more informed, data-driven decisions about the best possible care path for patients
- We will be working with Highmark to manage long-term acute care (LTCA), inpatient rehab (IRF), and skilled nursing facility (SNF) utilization.
- naviHealth offers a unique suite of care transition and decision support tools to predict patients' PAC needs and generate personalized care plans
- naviHealth Care Coordinators are licensed clinicals who (Provide expert clinical support services) and work in-market with the patient, patient's family, caregivers, acute and post-acute facility staff members to guide patients through their recovery, allowing them to make informed decisions about their care and discharge planning

naviHealth is the world's leading care transitions company

Partnership Objectives:

Program Goals:

- Apply data driven best practices and clinical protocols to LTACs, IRFs & SNFs
- Enhance patient outcomes
- Educate members on post-acute pathways and available resources
- Oversee proper care transitions to and from LTACs, IRFs & SNFs

naviHealth Interventions:

- Acute Hospitals: care Managers leverage onsite and EMR access to make post-acute placement recommendations within 48 hours of hospital admission
- LTACs, IRFs & SNFs: Care Managers optimize episodes of care, transitions and outcomes
