DMC 22: Statin Therapy for Patients with Diabetes

Attention: Documentation Only Update to the 2016 Medicare Advantage Stars Clinical Measures Presentation

A documentation only update was made to the Statin Therapy for Patients with Diabetes Measure found on pages 26-28 in the 'Review of 2016 Clinical Measures' document posted on February 11, 2016. The update corrected the denominator description. The correct description is as follows: Members ages 40-75 during the measurement year with diagnosis of diabetes who do not have clinical atherosclerotic cardiovascular disease (ASCVD). The presentation material was corrected and replaced the original documentation. The update did not change the measure which had been reported correctly.
